low sodium white fused alumina

Low sodium white fused alumina means white corundum with $\text{Na}_2\text{O} < 0.2\%$. The Na_2O content will affect the hardness, temperature compressive strength and bending resistance strength, etc. With a special smelting process, SanHui Abrasive presents Na_2O within 0.2% and Na_2O within 0.1% white fused alumina grain, and powder is suitable for high-level refractory and abrasive tools.
